```
CREATE DATABASE BankDB;
```

```
USE BankDB;
```

```
CREATE TABLE bank_transactions (  
    txn_id INT PRIMARY KEY,  
    customer_name VARCHAR(50),  
    branch_name VARCHAR(50),  
    transaction_type VARCHAR(20),  
    amount DECIMAL(10,2),  
    transaction_date DATE  
);
```

The screenshot shows a database management tool interface. At the top, there is a toolbar with icons for 'Result Grid', 'Filter Rows', 'Edit', 'Export/Import', and 'Wrap Cell Content'. Below the toolbar is a table with the following columns: txn_id, customer_name, branch_name, transaction_type, amount, transaction_date, and account_no. The first row of the table contains NULL values for all columns.
